

How to Clean Your Eyeglasses

Steps:

1. Wash lenses as needed with a mild non-abrasive soap and warm water, or a professional lens cleaner designed for eyeglasses, to remove dirt and oil.
2. Dry lenses with a professional lens cloth, clean non-abrasive cotton cloth, or non-moisturized facial tissue.
3. Hold glasses by the eye frame with our thumb and forefinger of one hand. Use the other hand to gently buff the lenses in a circular motion. Do not press too hard on the lenses.
4. Wash the cleaning cloth weekly with a mild non-abrasive soap. Avoid using fabric softener when drying the cloth.

Tips:

- Keep your glasses in a case when not in use.
- Be sure they are in a safe place.
- Do not use the tail of your shirt or necktie to clean your lenses. Most clothing fabrics contain abrasive fibers that will scratch or smear lenses.

You can purchase high quality professional lens cleaning products at any of our locations.
